

The Little Landfill That Could...Did!

In 2025 we are closing the last chapter in the history of Lebanon County's first planned 30-year, 53-acre, 7-cell, double lined landfill complex. What began in 1988 as a result of Pennsylvania passing Act 94, which at the time contained some of the most stringent landfill regulations in the country, is now a state-of-the-art, self-supporting solid waste and recycling complex that effortlessly blends in to the surrounding farmland.

When GLRA's first lined landfill Cell 1 opened in 1991 as the regulated destination for Lebanon County's municipal solid waste, Lebanon County had a population of about 113,000 that generated about 78,000 tons annually. Fast forward to 2025, we are entering the final stages of planning closure of the final landfill Cell 7 later this year. Today, we service over 143,000 residents and take in about 130,000 tons of municipal solid waste annually.

What was planned for Lebanon County's "little landfill" back in 1991 was a state-of-the-art facility that would be able to handle the municipal solid waste produced by Lebanon County's population for the next 28 years...Fast forward to today, we have exceeded that life expectancy by about seven (7) years amidst a growing population! GLRA proudly attributes that to 80% of Lebanon County with curbside recycling programs that divert such materials from the trash as well as GLRA's progressive and smart use of technology, such as compaction equipment, GPS, and the use of alternative daily covers over soil.

As GLRA enters its next generation landfill as you will read about on Page 8 of this newsletter, we are excited to see what the next 24 years bring!

About GLRA

Greater Lebanon Refuse Authority (GLRA) was formed under the guidance of the Regional Planning Commission in 1959. It is comprised of one representative from each of Lebanon County's twenty-five municipalities. GLRA is committed to managing a comprehensive solid waste management system in accordance with Lebanon County's Solid Waste Management Plan.

GLRA operates the facility in a manner that protects the health and safety of the residents of Lebanon County and the quality of the environment. The facility accepts an average of 417 tons of regulated municipal solid waste from Lebanon County each day---about 130,000 tons annually.

If you have ever wondered what happens to your trash after it is picked up from the curb, visit the landfill facilities for a tour and find out. Contact Amy Mazzella di Bosco, Recycling Coordinator, (717) 867-5790 Ext. 307 to arrange a tour of the landfill for your school class, community group, business or organization.

Landfill Rules and Requirements

Address: 1800 Russell Road, Lebanon, Pennsylvania 17046

Hours of Operation: Monday through Friday 7:00 AM to 4:00 PM
Saturday 8:00 AM to 12:00 PM

NEW | RENEWAL Licenses must be in by 3:30 PM Weekdays and 11:30 AM Saturdays.

Vehicles must be unloaded and off site by 4:00 PM weekdays and 12:00 PM Saturdays. Incoming gate closes at 3:50 PM weekdays and 11:45 AM Saturdays.

The landfill may close in the event of severe weather. No advanced warning may be given to closing the facility for a short time due to localized lightning or electrical storms. Please check *Latest News* on the homepage of our website at www.golra.org. Listen to one of these local radio stations: WLBR 1270 AM, 99.7 WiLBuR FM, and Froggy Valley 100.1 FM. On television, watch ABC News 27 WHTM-TV for any closure announcements.

All OPEN loads of waste **MUST BE TARPED**.

Make sure there are **NO HOT ASHES** in loads.

All customers must have a valid license. Licenses are obtained at the Scalehouse after providing the following forms of **VALID** identification:

- 1) drivers license
- 2) vehicle insurance card
- 3) registration card to vehicle

License Cost:

Cash Customer License - \$5 per year per vehicle

Commercial Customer License - \$25 per year per vehicle

Commercial Act 90 Waste Transporter License - Vehicles that have a valid DEP Waste Transporter License and meet GLRA's insurance requirements will be issued a GLRA license at no charge.

Vehicles over 17,000 pounds and Trailers over 10,000 pounds require a DEP Waste Transporter License per Act 90 of 2002. All vehicles or trailers under these conditions must have the DEP Waste Transporter License in order to access GLRA's Facilities. To obtain information online on how to obtain the DEP Waste Transporter License go to www.dep.pa.gov/Business/Land/Waste/SolidWaste/Municipal-Residual-Waste--Transportation/Pages/default.aspx or call DEP at 717-783-9258.

Charge accounts are available to commercial licensees with a **MINIMUM** of 60 tons of waste delivered during the previous calendar year to qualify.

COMMERCIAL CUSTOMER LICENSES HAVE SPECIFIC REQUIREMENTS. For more information or any questions on commercial customer license requirements, contact our office by phone at (717) 867-5790 or by email at info@golra.org.

The following types of waste are **UNACCEPTABLE** for disposal at GLRA's facility:

ELECTRONIC WASTE	EXPLOSIVES
LIQUID WASTE	HAZARDOUS WASTE
RADIOACTIVE WASTE	CHEMOTHERAPEUTIC WASTE
INFECTIOUS WASTE	PATHOLOGICAL WASTE

2025 Trash Fee Schedule

GLRA ONLY accepts the following waste types:

Residential Waste
Commercial Waste
Construction Waste
Demolition Debris
Clean Fill
Residual Waste
Green Waste
Clean Wood

Tipping Fee
\$72.00 per ton
\$36.00 minimum fee (up to 1000 pounds)

Includes Residential Waste, Commercial Waste, Industrial Waste, Construction Waste, Demolition Debris, Clean Fill, and Tree Stumps.

There is a \$15.00 surcharge on each appliance containing freon in addition to the tipping fee.

Special Handling Fee
\$80.00 per ton
\$40.00 minimum fee (up to 1000 pounds)

Special Handling of municipal waste requires a pit to be dug for immediate disposal and closure after placement of the waste. An Equipment Usage Fee may also be charged in addition to the Special Handling Fee.

Green Waste Fee
\$36.00 per ton
\$18.00 minimum fee (up to 1000 pounds)

Includes leaves, tree trimmings, grass clippings, garden residue, shrubbery, branches, limbs, prunings less than 4 inches in diameter.

DOES NOT INCLUDE plastic bags, rocks, treated or painted wood, tree stumps or tree trunks.

Clean Wood Fee
\$36.00 per ton
\$18.00 minimum fee (up to 1000 pounds)

Includes any untreated or unpainted wood products such as lumber, lumber scraps, or wood pallets which are free of any chemicals, paint, oils, solvents, epoxy glue or heavy metals.

2025 Holiday Schedule

Memorial Day	May 26	Closed
Independence Day	July 4	Closed
Labor Day	Sep 1	Closed
Thanksgiving Day	Nov 27	Closed
Christmas Eve	Dec 24	Close at Noon
Christmas Day	Dec 25	Closed
New Year's Eve	Dec 31	Close at Noon
New Year's Day	Jan 1	Closed

Tire Disposal Fees

Restrictions: No Rims
Rubber Tires Only (Steel Belted or Bias)

Bicycle	\$ 1.00 each
Motorcycle	\$ 2.00 each
Car	12" to 17" \$ 4.00 each
Truck	15" to 17" \$ 6.00 each
Truck	18" to 23" \$12.00 each

Other Tires will be weighed at 20¢ per pound
(Farm, Tractor, Heavy Equipment)

GLRA License Required

Acceptable Forms of Payment

All customers disposing of trash will have the option to pay using one of these acceptable forms of payment:

- Cash
- Personal Check
- Debit
- Visa*
- MasterCard*
- Discover*
- American Express*

**Please note that there will be a 3.0% surcharge applied to each credit card payment transaction.*

A commercial license must be affixed to the front driver's side bumper of a vehicle that is commercially hauling municipal waste.

What's a Commercial License?

Often there is confusion as to whether an individual's vehicle would be licensed as a Commercial Customer or a Residential Customer. Individuals often think that Commercial Licenses (permits) are only for those that pick up municipal solid waste (MSW) on a regular basis around the County using a garbage truck.

For purposes of licensing a vehicle, a Commercial License (permit) is defined as anyone who collects and hauls municipal solid waste and or residual waste for a fee, generally in a truck with more than four wheels. **This category also includes any size of vehicle that is used to collect waste from any property, job site, or location other than the property of the licensee for a fee.** A few examples are: landlords; junk removal; waste removal from someone other than yourself; and house clean-outs for foreclosures.

Residential Licenses (permits) are reserved only for those individuals who are bringing their **OWN** household trash into the landfill for disposal. When you are ready to bring your waste into the GLRA, and are still confused as to which license you will need, feel free to call into our office at (717) 867-5790 and someone will be available to assist you!

Pennsylvania Act 90 Recap

What is Act 90?

Act 90, Pennsylvania's Waste Transportation Safety Program, requires all waste transportation vehicles (trucks and truck tractors with a registered gross vehicle weight greater than 17,000 lbs. and trailers with a registered gross vehicle weight greater than 10,000 lbs.) transporting municipal or residual waste to waste processing or disposal facilities in Pennsylvania to have a valid Waste Transporter Authorization. The law prohibits processing and disposal facilities from accepting waste from waste transportation vehicles that do not have a valid authorization.

What does "Regularly Used" mean?

"Regularly Used" refers to the transportation of municipal or residual waste by a motor carrier vehicle or waste trailer if the transportation is being done for commercial purposes or in furtherance of a business. Publicly owned motor carrier vehicles and waste trailers are regularly used if the transportation is being done for the collection and transportation of municipal or residual waste.

Are Farm Vehicles Included?

Yes, if the gross vehicle weight rating of the truck or truck tractor is greater than 17,000 lbs. and or a trailer is over 10,000 lbs.

Important Information

Waste transportation vehicles with expired stickers/ cab cards are not permitted to dispose of waste at solid waste facilities in Pennsylvania. Accepting waste at processing or disposal facilities in Pennsylvania, from an unauthorized waste hauler, is a violation of Act 90. Haulers are reminded that they should submit a renewal at least 90 days prior to their expiration date to ensure no lapse in their authorization. Any questions should be directed to DEP at 717-783-9258.

Submit Commercial License Application Online

The GLRA's Commercial License Packet is now an **ONLINE** application process. It's paperless! No more paper documents! It is an instant **ONLINE** submission. GO to the homepage of our website www.golra.org CLICK the Commercial License Application **BUTTON** located on the **BANNER** at the **BOTTOM** of our homepage. Please call with any questions or concerns!

2024 GLRA Annual Employee Recognition Ceremony

On left, GLRA Employee of the Year James Hess, and on right, Executive Director Skip Garner

At its Annual Employee Recognition Ceremony held on December 13, 2024, GLRA honored **James Hess** as the 2024 Employee of the Year.

James, a Laborer with GLRA, was recommended to the Selection Committee by his fellow employees for his outstanding performance, dedication and the contributions he has made in helping GLRA achieve its goals. These notable qualities, along with his willingness to help others, train new employees, and take on new tasks to try and further develop himself, earned him this recognition from his fellow GLRA employees. James has become a quintessential part of the team here at GLRA.

In appreciation and achievement for the 2024 Employee of the Year, James was presented with a gift of his choice valued at \$500.

Longevity awards are presented each year to GLRA employees that have achieved noteworthy years of dedicated service to the organization. Five GLRA employees received a longevity award in 2024:

Stephen Smith, Truck Driver

- 10 Years of Service

Robert "Skip" Garner, Executive Director

- 5 Years of Service

Christopher Burns, Recycling Attendant

- 5 Years of Service

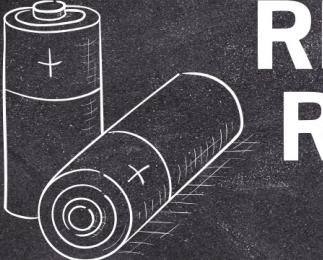

Timothy Pyles, Recycling Attendant

- 5 Years of Service

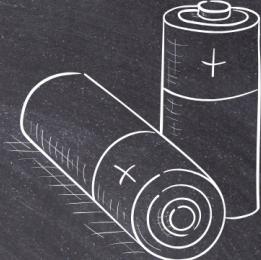

Marvin "Marty" Zimmerman, Recycling Attendant

- 5 Years of Service

In recognition for their years of service, these individuals were presented with a gift of their choice based on a monetary value specific to the year level of service.

We Are "Away"

In today's everchanging world we find ourselves updating cell phones, replacing box spring and mattresses, buying to-go food, and bagging groceries in plastic bags. These aspects of today's world are just a few examples of items we would like to recycle but they often get discarded as it is simply cleaner, quicker or easier. It is these types of products, along with the planned obsolescence of products we need for modern everyday life that have led us toward becoming a "Throw-Away Society".

A recent article in Orion Magazine stated that in a throw-away society "away is somewhere". The author, Meera Subramanian an environmental journalist, inferred that away for plastic is an island of waste afloat somewhere in the south Atlantic.

The truth is, that here in Lebanon County "away" is our system of waste haulers, recycling drop-off facilities, and the GLRA landfill. I fully understand that plastics and micro plastics have become ubiquitous in our modern world. However, I believe by separating recyclables, and utilizing a hauler to transport your waste and recyclables to the designated facilities you are assuring your byproducts of today's world are being properly collected and managed and that potential releases are being mitigated to the fullest extent possible. In other words, here in Lebanon County it is easy to do your part.

Lebanon County boasts 18 out of 25 potential municipal curbside recycling programs that allow residents to place separated recyclables curbside and have them picked up every other week. These programs are very convenient and mirror waste removal programs that have been well established for over 50 years.

Recycling drop-off facilities abound in the county. These facilities provide recycling for everything from batteries, tires, motor oil, glass, plastics, to junk mail. GLRA offers a centralized location to recycle a wide variety of materials including: #1 PET plastic bottles; #1 PET plastic thermoform packaging; frosted and colored HDPE plastic bottles; clear, amber and green glass; aluminum and steel cans; cardboard; magazines; mixed office paper and junk mail; empty propane cylinders; and tires.

GLRA also provides free recycling of electronics. This includes televisions, computers, monitors, and other computer peripherals. You can also drop off single use and rechargeable batteries for recycling at the same location. The above options for recycling provide the residents of Lebanon County convenient, efficient options to do the right thing and recycle.

The GLRA Landfill provides the citizens of Lebanon County a centralized disposal option for items that are not recyclable. Dirty diapers, broken windows, old furniture, floor sweepings, old mattresses, unwanted toys and all other materials identified as municipal solid waste get delivered to our site for proper management. GLRA manages about 500 tons a day of waste generated in Lebanon County. In other words, here in Lebanon County the GLRA is the “away” when thinking of properly handling your waste and recycling needs.

The landfill is a state-of-the-art facility designed to keep waste generated during our everyday lives from entering the environment. The water that drains from the landfill is called leachate which is captured via a double lined containment system and treated by the City of Lebanon Authority prior to discharge. The other byproduct of all modern waste management systems is methane gas that comes from the decomposition of waste in the landfill. Here in Lebanon County the entire landfill is maintained under negative pressure. This vacuum system is comprised of over 40 wells used to capture the methane. The gas is then plumbed to a landfill gas-to-energy plant, which generates enough energy to power 2,400 homes each day.

So not only is GLRA offering convenient recycling options, but it also is providing a sound environmentally secure landfill for the myriad of wastes that cannot be recycled. Rest assured, your “away” is part of an integrated system whose mission is to manage and dispose of Lebanon County’s waste in a manner that protects the health and safety of the public, its workers, and the quality of the environment.

Article contributed by Robert "Skip" Garner, Executive Director at GLRA.

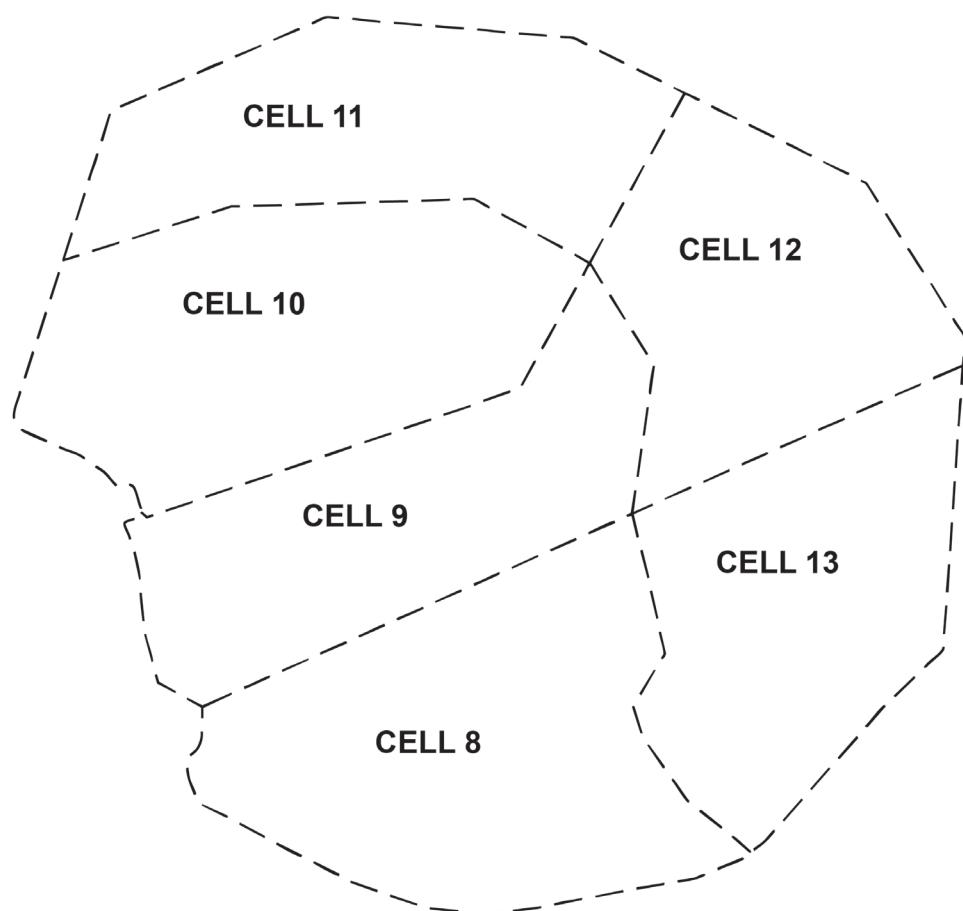

Life of Lebanon County's Next Generation Landfill

In response to the expected completion of the existing Schilling Landfill in mid to late 2025, the GLRA has begun placing waste in Lebanon County's Next Generation Landfill known as the Heilmandale Expansion. The Heilmandale Expansion will be fully lined top and bottom and include gas and leachate collection systems to protect the environment from pollutants.

In total, this expansion will consist of six (6) cells, or sections of the overall landfill, numbered 8-13. Each cell of approximately eight (8) acres is constructed independently, butting up against the previously completed cell. Construction will continue in a circular pattern until the final Cell 13 completes the overall landfill footprint of about 48 acres by tying back into the eastern side of Cell 8.

Preliminary estimates based on the worst-case scenario maximum allowable average daily tonnage of 750 tons/day indicate a proposed life expectancy of 2.5 years per cell for an overall total of 15 years of landfill capacity. The reality is that the GLRA will not be receiving the maximum allowable tonnage every day. So more conservative estimates based off the true average daily tonnage of about 500 tons per day extend each cell's life expectancy to closer to four (4) years, which increases the overall landfill life expectancy to around 24 years.

When the GLRA approaches completion of the Heilmandale Expansion around the year 2047 another generation of landfill will need to be considered. Right now, the two (2) most logical options for continued expansion are filling in the valley between the Schilling and Heilmandale Landfills or piggybacking on top of the existing Schilling Landfill after it has had a few decades to settle. Both scenarios offer unique benefits and challenges that will need to be assessed in order for the GLRA to continue to manage and dispose of Lebanon County's waste in a manner that protects the health and safety of the public, our workers, and the quality of the environment.

Cell	Area (Acres)	Volume (CY)	Life Expectancy (Years)	Operating Years
8	9.57	692,000	3	2023-2026
9	7.30	863,000	4	2026-2030
10	8.91	1,277,000	5	2030-2035
11	7.02	777,000	3	2035-2038
12	6.54	904,000	4	2038-2042
13	7.35	1,328,000	5	2042-2047

Lock In for Expansion and Restoration

As many people know, Lebanon County is home to the oldest existing transportation tunnel in the United States. This tunnel connects the Eastern and Western branches of the Union Canal and is situated at the heart of the Union Canal Tunnel Park. What not as many people know, is that a small branch of the main canal travels North from the North Portal of the Tunnel and passes right next to the GLRA. Along this small stream are sixteen canal locks, three of which can be found on GLRA land and are tended to by GLRA employees.

Interest in the GLRA canal locks began in the late 80s and early 90s when a previous executive director, Mike Pavelek, saw the potential to bring conservation, community involvement, and historical preservation to the landfill. With his direction, these three overgrown locks turned into a beautiful community facility boasting a mile long walking trail. The walking trail began with the Lebanon City Schools Class of 1998 and was expanded upon by various volunteer groups including neighbors Austin and Russell Heller and groups of local eighth-graders. Now after more than 20 years since its introduction, the GLRA Union Canal Trail and the three locks will be undergoing an expansion and restoration!

Plans for the expansion and restoration have already begun with clearing away brush from the locks, removing dead trees from the trail site, and generally laying the groundwork for the bulk of the expansion to come in the Spring. From here, documentation of the locks will be conducted by GLRA engineers to preserve their history before the restoration process takes place. The restoration of the three locks will be accomplished by GLRA employees with input from the Lebanon County Historical Society on best practices to ensure the locks' integrity.

In early Spring, safety features will be implemented along with planting of native grasses and plants and any finishing touches to the actual trail. The trail itself will be composed of two loops. The first loop starts from the parking area, next to the old Main Office at the corner of Russel Road and Emma Road, and travels along the original route for a quarter mile. Here the first loop branches to the West and winds through a meadow of native grasses and wildflowers before turning South to wrap back to the parking lot. The second loop starts similarly but branches to the East at the quarter mile mark. Here you descend a hand-dug staircase to the base of the first canal lock and follow a trail to the North-West skirting along the stream edge. On your way back to the parking area, you will pass by all three canal locks and walk along the edge of the wildflower meadow.

The bulk of the expansion and restoration will be completed by May 2025 just in time for the annual Union Canal Days at the Union Canal Tunnel Park. After the main expansion this Spring, more features will be added as community involvement increases. Some features already suggested by GLRA employees include a foot bridge, a bird watching platform, and more!

If you are interested in learning more about the history of the three GLRA Canal Locks, if you have suggestions for our walking trail, or if you want to volunteer during the restoration process, please give us a call! Here at GLRA, we are **"locked"** in and ready to learn and preserve our little patch of history.

Burning Trash Is A Thing Of The Past...

Open burning is an intentional fire lit where air contaminants emit directly into the outdoor atmosphere. Residential open burning is regulated in Pennsylvania and by many Lebanon County municipalities.

Why shouldn't we burn just anything?

Decades ago, our waste consisted of much “simpler” materials. Nowadays, synthetic materials are majorly dominating our society. When these synthetic materials are burned, toxic smoke pollutes the air we breathe.

Open burning isn't just dangerous to the individual conducting the burn. Irresponsible burning creates carcinogenic smoke, a big contributor to respiratory issues, short and long-term. This smoke may cause damage to vegetation, human and animal health. Lebanon County issues burn bans but burning violations often times still occur whether lack of common sense, lack of education on open burning and even deliberate disregard for such advisories. The spread of open burning, much like wildfires, is especially prevalent during drought and high-wind events. All it may take is a spark or popping ember. Unfortunately, many man-made fires spread and cause acres of damage, destroying buildings, homes and lives.

What causes this toxic smoke?

Materials that burn black, producing toxic smoke, are most synthetic materials such as rubber (tires), carpet, fuel, textiles (clothing), polystyrene foam (take-out containers & packaging), chemicals, plastics, shingles, paint, treated wood, upholstery (automobile and furniture), batteries, even printed paper, due to the inks, binders and page coatings – the list doesn't stop there!

Residents aren't the only contributing factors, right?

Greater Lebanon Refuse Authority assists with prohibited commercial burning. GLRA Regulations prohibit commercial businesses from open burning municipal solid waste, construction/demolition and residual wastes. Commercial Burning also includes landlords and farms. Farms do have an agricultural exemption on the basis of burning but only natural organic materials grown on the farm. Farmers are prohibited from burning those same materials which cause toxic smoke as mentioned above. There are potential penalties which may be issued for such open burning violations. Our first approach is education, our last resort is enforcement.

How can you help protect your community and environment?

If you see thick, black smoke or a questionable pile of furniture, trash or demolition materials, contact the local township or borough office. Provide supporting information like an address, an image of the smoke or pile, and when it occurred. They will know how to address reports of open burning in relation to an established ordinance and potentially take the complaint to task themselves or refer it through the proper channels.

At day's end, these regulations aren't about stomping on our “rights”, they are about health, safety and quality of life. You may recycle a variety of materials, reuse containers or jars as storage or for crafts, repurpose or donate gently used textiles and housewares. Utilize waste hauler services and discard your trash. It comes here, to GLRA, where it's managed properly. WE can contribute to cleaner air for ourselves and our future generations.

GLRA As A Classroom

Greater Lebanon Refuse Authority is Lebanon County's Landfill. As a resident, you put your trash in your curbside trash bin, your trash man picks it up and brings it here. It's that simple, right? Wrong... Although that's how most of the general public views our facility, our landfill is so much more. From the DEP Guidelines and testing requirements we must purposefully follow, to the active Wildlife Conservation Plan we are continuously building, to our daily business practices, there are countless learning opportunities within our organization.

Think of GLRA as a classroom...I promise, there's a lot more to learn here than you expect. For instance, many people may not realize, but GLRA hosts guided bus tours for local schools, clubs, organizations, and other interested parties. This allows residents of all ages to learn about the landfill in an interactive setting where they can observe our processes and ask questions. GLRA even pays the school bus transportation cost of the tour for Lebanon County Schools K-12. In that regard, GLRA is literally used as a classroom.

One of the many topics people seem to find interesting about our landfill is that we convert our natural "landfill gas" to electricity. This process happens when waste begins to decompose, and it naturally creates "landfill gas." The landfill gas is then filtered through our gas collection system to our current energy partner's (NextEra Energy) engines where it is then converted into electricity. GLRA has had a Landfill Gas-to-Energy Plant on-site since 1986. What began as a small plant generating an average of 1,200 kilowatts of electricity per hour or enough electricity for 120 homes each day; has grown into a new facility housing an education center that generates an average of 3,200 kilowatts of electricity per hour and electricity for approximately 2,400 homes each day.

As mentioned above, our Wildlife Conservation Plan is something the GLRA is very proud of. What started out simply as bluebird, kestrel and owl boxes is now an ever-evolving plan. GLRA has gone above and beyond to help create optimal conditions for our local wildlife. Currently there are bluebird, bat, owl, honeybee and kestrel boxes on site, all of which are regularly monitored and maintained by our staff. We also work closely with ZooAmerica®'s Kestrel Conservation Project. We typically provide their team a day to come out and safely band any kestrel fledglings while taking all their needed measurements for research purposes. While this may sound like a lot, I'm sure that by next year we will have added even more to this amazing plan. Learning and growing is always in the forefront for this organization.

This is just the tip of the iceberg though...Greater Lebanon Refuse Authority has so many interesting elements, and this organization, while integral to disposing of Lebanon County's municipal solid waste, still has so much more to offer in terms of learning and educating the public. Just as classrooms are equipped with educational resources such as books, computers, and other learning materials, GLRA's resources offer the same opportunities to gain knowledge and develop new skills. GLRA is truly a classroom for Lebanon County.
